

Fardin Kamran

+880 1740734780 - fardinkamran915@gmail.com - github.com/Fardin1023
Dhanmondi 12/A, Dhaka

TECHNICAL SKILLS

Programming Languages: Python, Java, TypeScript, JavaScript

Libraries / Frameworks: React, Next.js, Express.js, Node.js, PyTorch, Hugging Face Transformers, Tailwind CSS

AI / ML & Code Quality: LLMs, LoRA, QLoRA, PEFT, PMD, Designite, RefactoringMiner, static analysis, code-smell detection

Databases & Platforms: MongoDB, Vercel, Render, Clerk, Stream Video, Excalidraw

Other: OpenGL, Git, full-stack development, data mining

Core Strengths: Problem-solving, logical and analytical thinking, adaptability, quick learning, negotiation, team collaboration, communication

EDUCATION

BRAC University

Dhaka, Bangladesh

Bachelor of Science in Computer Science & Engineering | CGPA: 3.50

2021 - Present

Saint Joseph Higher Secondary School

Mohammadpur, Dhaka

Higher Secondary School Certificate | GPA: 4.17

2017 - 2019

Ispahani Public School & College

Cumilla, Bangladesh

Secondary School Certificate | GPA: 5.00

2017

WORK EXPERIENCE

Telesales Specialist

Oct 2025 - Jan 2026

Synergy Business Solutions

- Scheduled appointments with international clients through outbound telesales and client communication.
- Recognized as a top seller for consistently maintaining strong sales performance.

Product Sourcing Intern / Squad Leader

2024 - 2025

Gaotek, Remote

- Led a team to identify and source high-quality machinery products.
- Coordinated with suppliers, managed product data, and supported sourcing operations while serving as a squad leader.

ABOUT MYSELF

Results-oriented Computer Science & Engineering undergraduate with experience in full-stack software development, computer graphics, product sourcing, telesales, and applied LLM research. Skilled in Python, Java, TypeScript, React, Next.js, OpenGL, and AI-assisted software engineering, with a strong interest in building scalable, efficient, and practical systems.

PROJECTS

- BudgetBee - Personal Finance Manager.** Built a full-stack finance tracking web application using **React, TypeScript, Express.js, and MongoDB**, featuring income/expense management, monthly spending limits, financial analytics, transaction CRUD operations, authentication, and downloadable PDF reports. Deployed the frontend on **Vercel** and backend on **Render**.
- Cohiva - Virtual Classroom & Video Conferencing Platform.** Built a full-stack Zoom/Google Meet-inspired classroom platform using **Next.js, TypeScript, Stream Video, Clerk, MongoDB, Tailwind CSS, and Excalidraw**, featuring real-time meetings, collaborative whiteboards, recording, scheduling, participant moderation, persistent chat, attendance tracking, reactions, raise-hand tools, accessibility options, and teacher/student permission controls.

THESIS WORK

Title: Improving Structural Code Quality of Java Source Codes Through Automated Detection and Refactoring of Code Smells Leveraging Large Language Models (LLMs)

- Developed a two-stage LLM framework for Java code-smell detection and automated refactoring.
- Fine-tuned StarCoder2-3B and LLaMA-3.2-3B-Instruct, achieving up to 79.76% overall detection accuracy.
- Built a 109,755-example refactoring dataset across 12 categories from 11,150 Java projects using RefactoringMiner.
- Fine-tuned CodeLlama-13B-Instruct with QLoRA; generated refactored code achieved 99.72% compilation success.
- Evaluated structural quality against developer-authored refactorings, observing an 18.4% reduction in detected code smells.
